

Fonroche Lighting wins the solar lighting tender from Paris Airports

Agen, October 17, 2023. Fonroche Lighting, a global leader in solar public lighting, has just won the tender launched by the ADP Group (Paris Airports). This contract involves the supply of solar streetlights for the various platforms managed by the ADP Group, which operates the three main Parisian airports: Paris-Charles de Gaulle, Paris-Orly, and Paris-Le Bourget, as well as 12 general aviation aerodromes. This 3-year contract represents nearly 2000 Fonroche Lighting solar streetlights.

As the principal developer and airport operator in Paris, the ADP Group issued a tender for the supply of solar streetlights to renovate its lighting infrastructure and offer more efficient and sustainable equipment. The French company, Fonroche Lighting, already well-established in France and globally recognized for the quality of its products, has won this contract. Within the next 3 years, it will install several hundred solar streetlights manufactured at its industrial site located in Lot-et-Garonne. By partially directing its lighting policy toward solar technology, the ADP Group aims to achieve immediate savings and commit to ecological and sustainable solutions for future generations. These streetlights will illuminate several parking lots, roads, and technical areas across different airport zones within the group.

"MADE IN FRANCE" HONORED

As a French manufacturer of solar streetlights for over 12 years and a leader in its market, Fonroche Lighting has proposed the most competitive offer from a technical and economic standpoint. It has notably relied on its expertise and know-how:

- The power and reliability of its lighting, guaranteeing 365 nights of illumination per year.
- The very long lifespan of these solutions.
- The absence of maintenance.

With its easy installation, no cables, no electrical cabinets, and its autonomous operation without an electricity bill, solar streetlights are more competitive than conventional grid-connected lighting, right from their installation.

A NEW FLAG IN THE FONROCHE LIGHTING SUCCESS STORY

"This new flag represents a strong milestone in the Fonroche Lighting adventure! Just like our previous remarkable achievements: the lighting of the Calais highway, the Cartagena Viaduct in Colombia, the installations in Senegal and Benin, or more recently the Agen Agglomeration that is set to become the largest European park for solar public lighting..." expresses Laurent Lubrano, CEO of the French company.

"Paris Airports is a flagship of France, and it's a great pride for us to equip them and witness Fonroche's expertise in solar lighting being recognized. The high number of passengers from around the world, service provider companies, and numerous public and private actors using these infrastructures every day constitutes for us a permanent, large-scale showroom and certainly the most beautiful technological demonstrator in France," concludes Laurent Lubrano.

A SOLAR REVOLUTION UNDERWAY IN FRANCE AND AROUND THE WORLD

With over 1000 new communities lit up each year and hundreds of private companies, Fonroche Lighting continues its global development, showcasing its ability to equip all types of infrastructures, from the simplest (parking lots, roads, neighborhoods, bus shelters) to the most complex (highways, interchanges, roundabouts, technical platforms, viaducts, etc.).

FONROCHE
lighting

About Fonroche Lighting: In just a few years, Fonroche Lighting has become the global leader in solar public lighting. Headquartered in southwestern France, the company designs, develops, manufactures, and installs autonomous solar streetlights that illuminate various infrastructures, ranging from smaller projects like bus stops, roads, parking lots, and greenways to larger structures like highways, roundabouts, cities, and even entire countries. With nearly 200 employees, Fonroche Lighting exports its innovative technology internationally, with subsidiaries in Africa, Latin America, Europe, and the United States. The company is experiencing robust growth, with a turnover of €57 million in 2022 (€49 million in 2021) and aims to reach €100 million by the end of 2023.
